

BLOMSTER TONDER

Vore blomstertønder er lavet i egetræ eller acacie. Begge træsorter har en lang levetid. Disse træsorter er miljøvenlige og behøver ikke yderligere behandling. For at beholde en smuk patina, kan tønderne dog behandles med voks eller f.eks. linolie. Båndene der er omkring tønderne er lavet i galvaniseret jern og vil ikke ruste. Træet er tørret ned til ca. 8% inden samling af tønderne. Bunden er hævet op, således at vandet kan frit løbe fra ved overvanding. Der er 2 bæreringe i tønderne, således det er muligt at flytte tønderne. Blomstertønderne har fra begyndelsen et hul i bunden, men vi anbefaler at der bores flere huller i bunden hvis tønden skal bruges til blomster. Hvis den derimod skal bruges til at have vand I – luk hullet med en klat silicone. Vore tønder er selvfølgelig frost sikre – dog hvis man har vand i tønderne, bør de tømmes inden frosten.

These barrels are made in oak or Acacia. Both kind of wood has a long durability. This kind of wood is environment friendly and it need no further treatment in order to last though out the years.

You can use sealing wax or you can use nearly all kinds of wooden oil for giving the barrels another patina. The band is made of galvanized material, so it will not get rusty.

Please note that the wood has been dried down to approx.. 8% before using !

Also notice that the bottom has been raised 4-5 cm so the water can run out freely if you over water the barrels.

We included also 2 rings for carrying the barrels during the season or before the winter comes.

You receive the barrels with one hole in the bottom, but we advice our customers to drill more holes if they want to plant flowers etc .in it.

If the barrels are used for flowers they are frost secured in the wintertime.

The barrels can be delivered oiled or not oiled!
